

ExBanking test assignment

Description

Let's assume that you've decided to build a Banking service. You've completed your development and produced following APIs (it's your application, feel free to define requests and responses for them);

- ***create_user***
- ***deposit***
- ***withdraw***
- ***get_balance***
- ***send***

Assignment

1. Could you please provide functional and non-functional test cases?
2. Could you please provide automation for a non-functional test case?
3. Could you please provide following items for 10% of functional test cases;
 - a. Mock / service virtualization of ExBanking
 - b. Test automations

FAQ;

- API can be REST or GraphQL, but Protobuf is a plus.
- Code should be written using JavaScript. You can use any testing libraries.
- No security, role or authorization tests needed. They'll be ignored.
- Please do assertions via APIs.
